

Password managers

Last Modified on 03/29/2024 10:31 am EDT

Use a **password manager** to securely and efficiently access your accounts!

What is it?

A **password manager** is a service or feature that **securely stores and autofills** your account credentials.

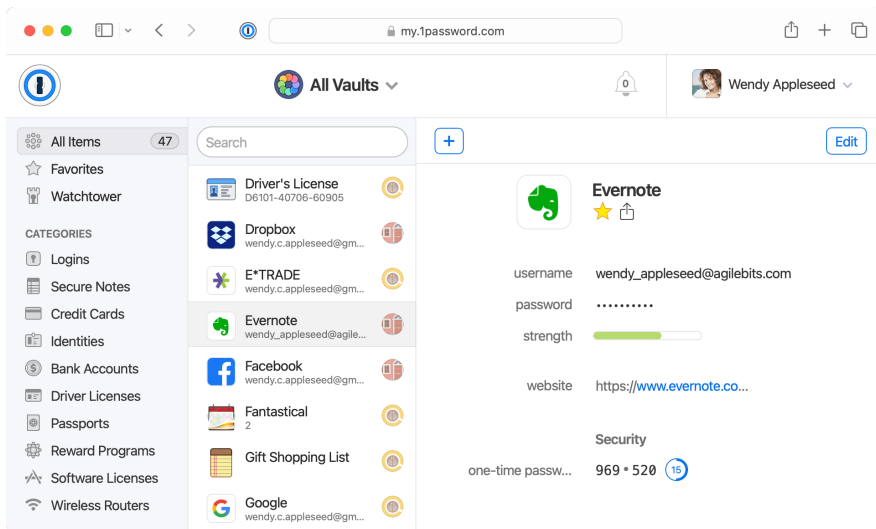

- **Automatically save** new accounts
- Generate **unique and complex** passwords
- **Securely store** other sensitive information

Is this what my browser does?

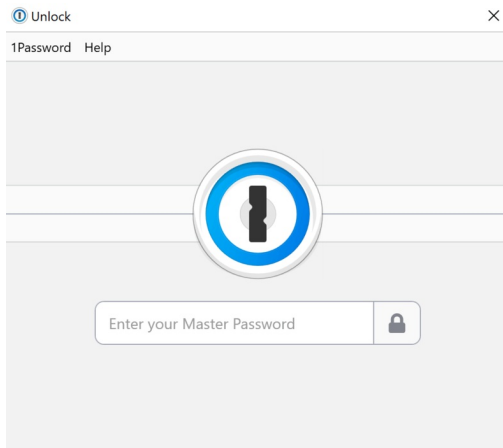

Isn't it bad to have all my passwords in one place?

How it works

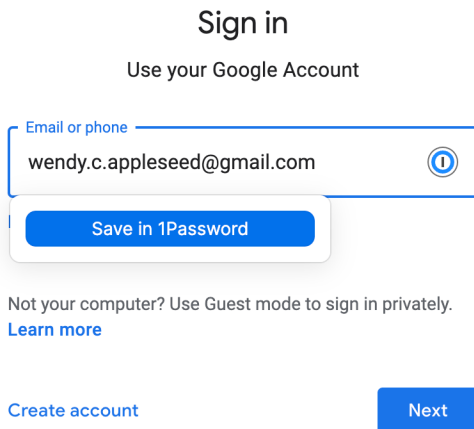

1. Your sensitive information is stored in a **centralized vault**

2. Accessed via **desktop application, browser extension, and/or mobile app**
3. The vault is **unlocked with a master password**

4. Logging into a **new website automatically stores the credentials**

5. Stored credentials **autofill** when visiting that site
