

# WordPress: FontAwesome for WordPress

Last Modified on 07/27/2022 4:09 pm EDT

FontAwesome for WordPress allows you to insert FontAwesome icons into your page or post either by using shortcode or HTML.

Choose the icon you want from the [FontAwesome icon gallery](#). All free icons are supported. Please note that pro icons are not supported at this time.

## Shortcode Examples:

You can insert the  cog icon by using the shortcode below.

```
[icon name="cog"]
```

You can use prefixes to display icons with different styles like below.

```
 [icon name="check-square" prefix="fas"]
```

```
 [icon name="check-square" prefix="far"]
```

If no prefix is specified, FontAwesome will default to prefix="fas". Some icons only have one style such as the  clock icon.

Adding FontAwesome icons can provide helpful visual indicators in your documentation. For more information, visit the [plugin homepage](#).

## Questions?

If you have any additional questions or problems, don't hesitate to reach out to the [Help Desk](#)!
