How to view information about, manage and log into the applications you've installed on your Domain of One's Own domain (including WordPress, Scalar, Omeka, or Grav).

**Before you start**, you will need:

- a [Domain of One's Own account](https://digital.brynmawr.edu)
- an application installed on that account

Applications you have installed are listed on the **My Applications** page of your Domain of One's Own Dashboard/CPanel:

1. Go to [digital.brynmawr.edu](https://digital.brynmawr.edu) and click **Dashboard**.
2. Log in using your Bryn Mawr College username and password.
3. Click **Applications** in the left sidebar.

Each application listing has **three URLs related to the website** created by this application:

- **Share the top URL** (by the [location] icon) with anyone who needs to **view the website**.
- **Use the middle URL** (by the [sign-in] icon) to **log into the website** using the admin username and password you created when installing the app. You will need to log in to your site in order to:
  - Create user accounts for other people (once you do, they will also use this URL to log in).
  - Add and edit pages and content
  - Change the appearance, add navigation elements, and turn features on and off
  - Install and update plugins
- **Use the bottom URL** (by the [help] icon) to view the application developer's how-to guides.
There are also four buttons you can use to manage the application files installed on your domain:

- Click  (view/edit details) to view and manage updates, backups, and files, and view info about the application's database (if applicable)
- Click  (backup) to manually back up everything.
- Click clone to create an exact copy of everything in a new location. (This is useful when migrating to a new hosting service, but otherwise uncommon.)
- Click X (uninstall) to uninstall the application and associated databases and files.

Questions?

If you have any additional questions or problems, don't hesitate to reach out to the Help Desk!
