Panopto: Record with multiple video sources

Last Modified on 10/28/2025 12:53 pm EDT

Note: The following options are only available if you're recording on your device using Panopto for Mac or Panopto for Windows. They are not available in Panopto's web-based interface, Panopto Capture.

Panopto lets you record with multiple cameras or add footage like document mark-ups, artistic performances, and lab demos to your recordings. You can do this by replacing or supplementing the video recorded by your computer's built-in webcam or any in-classroom camera.

Before you begin, you need:

- a Panopto account under Bryn Mawr's license
- An external recording device, including any cords that connect it to the device where you're using Panopto. Contact the Help Desk

 if you need assitance getting the right equipment.

Add a secondary video source

If you want to add footage from your external camera to your recording, make it your secondary video source.

Replace your primary video source

If you want to use an external camera instead of a built-in webcam or a classroom's primary camera, make it your primary video source.
