

Panopto: Record in your browser (Panopto Capture)

Last Modified on 07/18/2024 1:10 pm EDT

Panopto Capture is a completely browser-based screen capture system that allows you to capture audio, video, and your device's screen or application windows in a recording. Panopto Capture is a good alternative to the [Panopto desktop recording app](#), particularly on classroom Mac computers.

Before you begin, you may need:

- A device with a web browser, a microphone and (if you want to capture video) a camera
- A high-speed Internet connection
- An account on [Bryn Mawr's Panopto site](#)

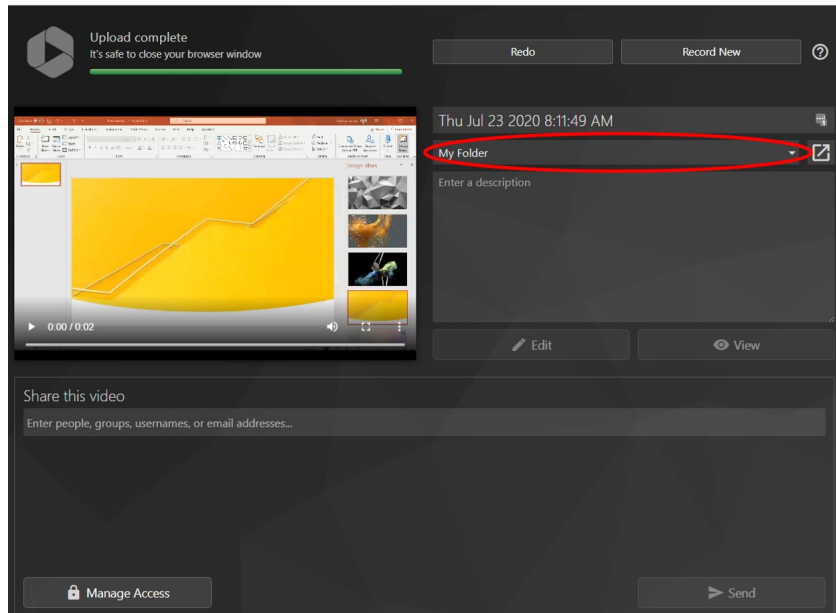

Create a Panopto Capture video

1. Log in to [Bryn Mawr's Panopto site](#) (if you haven't accessed it previously, see [Panopto: Get and log into your account](#)).
2. Click on **+ Create** button and select **Panopto Capture**.
3. **Panopto Capture** will open in a new browser window.

4. Click on the buttons for **Audio**, **video**, and **Screens and Apps** to change these settings. Consult [Panopto: Add a presentation or web content to a recording](#) and [Panopto: Record with multiple video sources](#) if you need help with these features.
5. Before you record, click on **Settings** if you want to change things like screen resolution, outputs, video layout, background.

6. Once you have configured your settings, press the **Record** button. To stop your recording, press **Record** again.
7. A new page will open as your video starts processing. If you would like to redo your recording, you can hit **Redo** or **Record New**. Otherwise, Panopto will proceed with processing.
8. By default, the recording will be stored in [your My Folder folder on Panopto](#). If you would like to change this to a different folder, select the drop down arrow under **My Folder** and search for the folder you'd like to use.

9. Once your video is finished processing, you can decide who will be able to access it via [sharing settings](#).
